SUMMARY

Senior Software Engineer with 4+ years of experience building Laravel platforms, REST APIs and websites. At Seluh I lead a three-person team that builds and runs three products: a multi-tenant ERP SaaS, a booking platform behind iOS and Android apps, and an online booking site with KNET and Mastercard payments. I also deliver freelance websites end to end, from design and domain to hosting, for clients in Singapore, Sri Lanka and the USA, and use AI-assisted development (Claude Code, Cursor, MCP) every day.

SKILLS

Backend: PHP, Laravel, Livewire, Filament, REST APIs, Laravel Sanctum, Node.js, Express

Frontend: Next.js, React, TypeScript, JavaScript, Tailwind CSS, Alpine.js, Vue.js, jQuery, Blade, Twig, SASS

Mobile: Flutter

CMS: WordPress (headless with ACF, Gutenberg, Elementor, Breakdance, WooCommerce), Drupal (custom modules, Views, Paragraphs)

Databases: MySQL, MariaDB, Redis

DevOps: Docker, Nginx, DigitalOcean, Linux, GitHub Actions CI/CD, staging environments, Supervisor, Vercel, Platform.sh

Payments: KNET, Tap Payments, Mastercard, webhooks and callbacks

AI & tools: Claude Code, Cursor, MCP, Git, GitHub, GitLab, Bitbucket, Jira, Postman, Composer, Drush, Lando

EXPERIENCE

Senior Software Engineer · Seluh Mar 2025 – Present

Khaitan, Kuwait · Onsite

Lead a three-person development team that builds and runs all three of Seluh's products, owning architecture, infrastructure and delivery.

- Own the architecture and CI/CD across all products, with a staging environment so releases are tested before production.
- **Omnia-I ERP** (multi-tenant SaaS for POS, inventory, accounting, delivery and HR): built multi-tenancy, subscriptions, roles and permissions, and the delivery, maintenance and fleet management modules, plus a Flutter app for the delivery team.
- **Mend** (home-services booking): built the Laravel API behind the iOS and Android apps and the admin dashboard the team uses to run bookings.
- **Home Service Massage:** designed and built the bilingual Arabic/English booking site and Filament dashboard end to end, from domain and Docker setup to launch.
- **Payments:** integrated KNET, Tap Payments and Mastercard across the three products, with webhooks, callbacks and transaction logging.
- **Marketing sites:** designed and built the Omnia-I website in Next.js, with live pricing from the platform's API, and the Mend website with its own content CMS.
- Run production on DigitalOcean with Docker, Nginx, Redis, queue workers and GitHub Actions; use Claude Code, Cursor and MCP daily to plan, ship and debug features faster.

Laravel Developer · Alphabetical IT Nov 2024 – Apr 2025

Texas, USA · Remote

- Built web applications in Laravel with MVC, Eloquent ORM and Blade as part of a remote Agile team.
- Built RESTful APIs, integrated third-party services, and implemented authentication and authorization.
- Set up WordPress as a headless CMS with Advanced Custom Fields for the Institute for Optimum Nutrition (UK), ready for the front-end developer's Next.js site.
- Took part in code reviews and worked with Business Analysts and Project Managers through Jira to deliver on time.

PHP Developer (Drupal) · **Fat Beehive** Oct 2023 – Oct 2024

London, UK · Hybrid from the Colombo office

- Back-end Drupal developer across multiple charity websites, fixing bugs and building new features with custom and contributed modules, Views and Paragraphs.
- Front end with HTML, SASS, Gulp, JavaScript and jQuery; back end with PHP, Twig and Drupal.
- Improved site performance through caching, and kept sites secure and stable with regular maintenance and updates.
- Worked with Docker, Linux, Lando, Bitbucket and Platform.sh, and contributed bug fixes to a Laravel project.

Web Developer · **Maverick** Feb 2023 – Sep 2023

Auckland, New Zealand · Remote

- Built client websites with WordPress, Breakdance and WooCommerce, using PHP, MySQL, HTML, CSS and jQuery.
- Developed a custom wishlist plugin tailored to a client's requirements.

Trainee Developer (Drupal) · **OmobioNG** Jun 2022 – Jan 2023

Colombo, Sri Lanka · Remote

- Front-end development and content work on Dialog.lk, the website of one of Sri Lanka's largest telecom and internet providers, using Drupal, HTML, CSS, Bootstrap and jQuery.
- Worked in an Agile Scrum team with sprint planning and Jira, alongside Business Analysts and Project Managers; GitLab for version control.

FREELANCE PROJECTS

- **KGN Infra Solutions** · Singapore · kgninfrasolutions.sg
  Designed and built a construction and BPO company's website in Next.js in one week, including domain and hosting.
- **Ceylon Singa International** · Sri Lanka · launching soon
  Returning client: designed and built a trilingual (English, Sinhala, Tamil) study-abroad website in Next.js, from the .lk domain to hosting.
- **The Bethel Christian Academy** · Florida, USA · launching soon
  Rebuilt the full website from a Figma redesign using Elementor Free, with custom CSS and JavaScript where the builder fell short.
- **Ness Digital Engineering** · ness.com
  Fixed CSS/SCSS issues across the site's custom Gutenberg blocks, corrected WordPress configuration and helped take site backups.

OPEN SOURCE

- **Quran Reader** · VS Code extension · 60+ installs · 5-star reviews
  Read the Quran inside VS Code with Arabic text, English translation and audio recitation.
- **PhpSmith** · VS Code extension · 60+ installs
  PhpStorm-style quick fixes that create missing PHP classes, enums, interfaces and traits using composer.json PSR-4.

EDUCATION

HND Software Engineering · Southampton Solent University, UK 2019 – 2021
